

Introducing the 57-A550-59M ANNUNCIATOR PANEL

The 57-A550-59M Annunciator Panel offers increased visibility, auto dimming, lamp test, audible alarm operation in several modes and reduced panel height. This design is particularly well suited for marine multi-trip applications.

Summary of Features

- Multi-trip or exclusive-trip operation
- Auto-dimming of Power and Enabled lights (switch selectable)
- Engine Saver reset button (-59M only)
- Alarm silence button
- Choice of four alarm volume levels (switch selectable)
- Alarm reminder after alarm silence (switch selectable)
- Lamp test button (tests audible alarm and Engine Saver lamps also)
- High contrast black background
- Wide viewing angle
- Low profile (only 3 inches of panel height)
- Rear dust cover standard (boots for pushbuttons optional)

This combination of features gets the attention of the busy captain or operator immediately when there is an alarm while allowing him or her to silence the audible portion to keep it from being annoying. A silenced alarm will still be visible and will not be forgotten because of the one-minute periodic reminder chirp. Pressing the *Master Reset* always clears all alarms. However, a new alarm will be generated by the Engine Saver® in a short time if the fault that caused the alarm still exists. The end result is that the captain or operator will always be fully informed of the status of the engines without unnecessary distraction or annoyance.
