

Introducing the 57-A550-59I Light Bar ANNUNCIATOR PANEL

The 57-A550-59I Light Bar Annunciator Panel offers increased visibility, auto dimming, lamp test, audible alarm operation in several modes and reduced panel height. This design is particularly well suited for exclusive-trip applications on heavy equipment, but may be operated in the multi-trip mode if desired. The multi-trip mode displays multiple alarms, while the exclusive-trip mode displays only the first alarm.

Summary of Features

- Exclusive-trip or Multi-trip operation
- Auto-dimming of Power and Enabled lights (switch selectable)
- Three AUX channels available; 2 Engine Saver, 1 external
- Alarm silence button
- Choice of four alarm volume levels (switch selectable)
- Alarm reminder after alarm silence (switch selectable)
- Lamp test button (tests audible alarm and Engine Saver lamps also)
- High contrast black background
- Wide viewing angle
- Low profile (only 3 inches of panel height)
- Rear dust cover standard (boots for pushbuttons optional)
- Connector features screw terminals

This combination of features gets the attention of the busy operator immediately when there is an alarm while allowing him or her to silence the audible portion to keep it from being annoying. A silenced alarm will still be visible and will not be forgotten because of the one-minute periodic reminder chirp. The end result is that the operator will always be fully informed of the status of the engine without unnecessary distraction or annoyance.
