

•Don't miss these important new products coming early 2010!

For years, our Replacements for Onan® Controls & Voltage Regulators have offered the industry an unbeatable combination of Low Pricing, Improved Design, 2 Year Warranty, and in many instances availability of part numbers the manufacturer has chosen to obsolete.

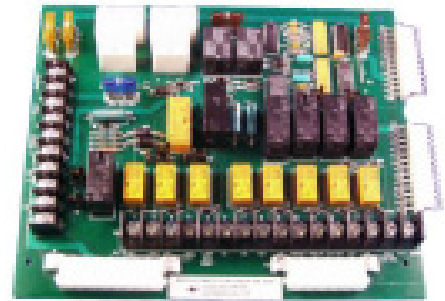

We'll continue expanding our Onan® replacements line in 2010, but for the first time we'll be introducing a line of

UNIVERSAL VOLTAGE REGULATORS!

Currently under development in our Engineering Department, our first "Universal" Regulator is targeted to replace the **Newage® SX460, Onan® 305-0982, Delco® H3500 Series, Basler® KR4F and others.** With Flight Systems' Quality, Low Price, Factory Technical Support, 2-Year Warranty, and - unlike most comparable designs - Repairability - this product will set new standards for the industry!

Also coming soon will be our replacement for the **Onan® 300-2880 Regulator.** As with Flight Systems' replacements for the 300-4296 & 300-4297 Engine Monitors (seen at right), our "plug & play" design will cost half that of the original plus carry our 2-Year Warranty.

Keeping the Power **ON** for over 30 years:
